Personal Project

FAGIA – API Rest
Academic Project
REST Api project made for the class "Applications Development" in the Rust Programming Language with the framework "Actix-Web", the purpose of this project is provide the beneficiary institutions such as Banks of aliments, or other organizations a way to manage the donations received, and to give them more exposure and help them control over the operations, so they can manage the aliments and distributed in a more efficiently and controlled way.

GPC Logistica
Intern – Information Technology Department
Provided corrective, preventive, and perfective maintenance for the company's ERP system developed with the PHP Laravel 10 framework. During my internship, I implemented new features that contributed to business logic. I utilized Livewire and Node.js libraries to develop interactive, real-time, and responsive components.

Sagoz Barber Shop – Web Application
Frontend Developer – Next.js
Web application developed with Next.js and Express.js, using MySQL for data storage. The application is containerized with Docker and managed via a reverse proxy with Nginx for the SAGOZ Barber Shop. It manages appointment scheduling, services, staff, working hours, and branch locations, with a client-facing interface for booking appointments.

Dictum System – Web Application
Backend Developer – NestJS
Web application developed with Next.js and NestJS, using Microsoft SQL Server for data storage. The application is containerized with Docker and uses Nginx to route requests to the corresponding services. It manages and generates the workflow for official reports for the Government of Coatzacoalcos.

Sebastián de Jesús Hernández Montero
